The fate of your business depends on your response to health & safety concerns.

Office Interiors Group has the expertise, technology and personnel to remove health hazards. Eliminating hazards in the workplace is not new, emerging biological threats are. Influenza, C. Diff, MRSA, and coronavirus have negative impacts on our lives, our economy and overall demeanor. OiG utilizes cutting edge technology to electrostatically disperse charged and atomized hypochlorite solution killing 99.9999% of these germs.

Office Interiors & Much More...
OiG has been serving our clients for over 20 years. We focus on creating great environments for the environments of our clients and community. Progressive, we are adaptive to the emerging needs of our clients in all aspects of business.

CDC Guidance
The Centers for Disease Control provides useful guidance and resources for coronavirus and 2019-nCoV infection control measures that include hand washing, shielding coughs and sneezes, avoiding contact with infected individuals, and to clean and disinfect objects and surfaces with an EPA-registered disinfectant.

Safety of your Staff & Customers

Our unique application process reduces the volume of chemicals introduced to your workspace while increasing 360° coverage and overall effectiveness. Of 99.9999%. Mitigation by untrained personnel exposes risk to you, your staff and your customers. Spray & wipe methods of disinfection use 300% more chemical solution (if available).

Effective
- Treats front, back and sides
- Sodium Hypochlorite (sodium dichlor-s-triazinetrione) is effective against 99.9999% of all germs and viruses
- Utilizes a patented cutting-edge application system
- 8x more effective than non-charged systems
- Eliminate human error

Efficient
- Faster application
- No wait-and-wipe time
- Enables staff to focus on productive efforts
- Eliminates excessive chemical costs and availability concerns
- No downtime, areas can be treated day or night.

Benefits
- Assurance to staff of a safe and healthy workplace
- Assurance to customers & clients of a safe environment
- Increase morale
- Reduce potential sick days
- No sticky residue/ foul odor

Services
- Weekly, bi-weekly & monthly service plans available
- Single emergency treatment (limited availability)
- Application levels:
  1. Preventative Measure
  2. Potential Exposure
  3. Confirmed Exposure
Absenteeism due to illness is a costly factor for employers. Infected people can spread germs and virus through coughing, sneezing or talking. Droplets from an infected person get into the air and can be inhaled by people nearby. Anyone within three feet can easily be infected. Germs are also spread when a person touches something that is contaminated with the germ, and then touches their eyes, nose or mouth. Collaborative individuals and those in leadership positions maybe at the greatest risk and ultimately pose the greatest risk due to the scope of their interactions.

The Centers for Disease Control provides recommendations that include the treatment of environmental surfaces with an EPA registered disinfectant. While spray and wipe methods are common, they fall short of complete coverage and often require waiting periods. The result is a costly process providing inadequate treatment, false sense of security an increased risk of contamination.

Office Interiors Group, a leader in providing comprehensive solutions to our commercial customers, has the expertise, technology and personnel to remove biological hazards.

Early investment in cutting edge electrostatic application technology, proven during the 2014 Ebola outbreak, enables us to offer mitigation services to our clients. We utilize an electrostatic dispersion system that pressurizes and atomizes a sodium dichlor-s-triaiinetrione (NaDCC) solution. Current demand limits availability; however, OiG has been able to reserve quantities available to serve our customers, present & future, including projected growth.

Speak with your OiG account manager to determine the appropriate level of treatment from Preventative Measure, Potential Exposure or Confirmed Exposure. One-time emergency treatments may be available (schedule permitting). The recommended frequency for application is weekly with bi-weekly and monthly treatment plans available.

Application and treatment can occur either inside or outside of business hours¹. If your office has been temporarily closed either because of business decision or the result of judicial order, OiG can pre-treat and eliminate any potential scheduling conflicts upon your return. This enables your workforce to return to work sooner than might otherwise be permitted while giving your staff the assurance that theirs is a safe working environment.

Call now to schedule treatment of your commercial space by our professional, uniformed team.

¹We recommend ‘Level 3 – Confirmed Exposure’ treatments be conducted without staff present due to the intensive treatment process and the required use of personal protective equipment.

Office Interiors Group has been in business for over 20 years with experience in all aspects of acquiring, designing, equipping & furnishing, maintaining, reconfiguring and liquidating commercial spaces. Mitigating health hazards requires experienced personnel trained in using the latest equipment with the appropriate chemicals in manner promoted by the Centers for Disease Control and the World Health Organization.

We do great things for the environments of our clients and our community. Call click or come up to by and let us show you how we make it easy. Contact your OiG Account Manager for more details.

Call me at 202-439-0413 for more information and to schedule your mitigation treatments.
